

What is claimed is:

1. A treatment tool to be inserted into a human body through an endoscope, comprising:

an elongated inserting portion to be inserted through an accessory channel of the endoscope;

a supporting member attached to a distal end of said inserting portion, said supporting member being provided with a slit;

a shaft attached to said supporting member so as to cross said slit in a width direction thereof;

a pair of manipulation members pivotably supported by said shaft within said slit so as to open and close like a pair of pincers; and

a spacer located between said pair of manipulation members,

wherein said shaft is supported by said spacer so as not to come off from said supporting member.

2. The treatment tool according to claim 1, wherein said shaft is pressed into said spacer.

3. The treatment tool according to claim 2, wherein said spacer is provided with a through hole having an inner diameter smaller than an outer diameter of said shaft, said

shaft being pressed into said through hole.

4. The treatment tool according to claim 1, comprising a pair of said shafts, both of said shafts being pressed into said spacer, each of said pair of manipulation members being pivotably mounted to respective one of said shafts so as to open and close like a pair of pincers.

5. The treatment tool according to claim 4, wherein said spacer is provided with a pair of through holes formed in parallel to each other, each of said through holes having an inner diameter smaller than an outer diameter of each of said shafts, said shafts being pressed into respective one of said through holes.

6. The treatment tool according to claim 1, wherein said pair of manipulation members are a pair of electrodes, and wherein said spacer insulates said electrodes from each other.

7. The treatment tool according to claim 6, wherein said spacer is made of poly-tetra-fluoro-ethylene.

8. The treatment tool according to claim 6, wherein said spacer is made of ceramic.

9. The treatment tool according to claim 6, wherein said manipulation members are connectable to a high frequency power supply.

10. The treatment tool according to claim 1, wherein said supporting member is made of insulating material.

11. The treatment tool according to claim 10, wherein said supporting member is made of rigid plastic.

12. The treatment tool according to claim 10, wherein said supporting member is made of ceramics.
